What signals
indicate a higher
chance of
advancing?

Signal	Corr. with offer_sent	Corr. with hired	Avg (advanced)	Avg (did not advance)
Technical test score	0.47	0.41	82.2	70.1
Manager score	0.47	0.35	81.7	70.2
Behavior score	0.37	0.28	80.8	71.5
Years of experience	0.11	0.10	6.6	5.5
Response time (days)	-0.03	-0.01	5.8	6.1

Technical test score and
manager score are the
strongest predictors of
advancing to offer

When is it worth persisting with a candidate?

When is there a low probability of conversion?

It's worth pushing for candidates who score above 70 on the technical test, below that, and especially when both the test and manager scores fall under 70, the odds barely move, so extra effort like rescheduling or chasing just isn't worth it.

	N	Offer rate	Hire rate
Both scores ≥ 70	100	60%	47%
Either score < 70	101	2%	2%

Recruiters Performance:

Bruno converts 15.3% of candidates to hire, Fernanda, 3.9%: a 4x gap on similar volumes.

It's not candidate quality, scores are nearly identical across recruiters. The gap is post-offer: Bruno closes 100% of offers sent, Gustavo closes only 54.5%.

Action: map what Bruno and Ana do differently at the offer stage (timing, negotiation, follow-up) and replicate it with Gustavo, Diego, and Fernanda.

Recruiter	Sourced	Offered	Hired	Offer→Hire %	Hire Rate %
Bruno	98	15	15	100.0%	15.3%
Ana	75	13	10	76.9%	13.3%
Carla	101	12	9	75.0%	8.9%
Gustavo	121	11	6	54.5%	5.0%
Diego	103	6	5	83.3%	4.9%
Fernanda	103	5	4	80.0%	3.9%
